Optional accessories for multi spindle series

When configuring the range of multi spindle machinery, several customer / application specific accessories may be required, we like to think we have one of the most comprehensive available, and can offer a solution to almost and winding requirement.

Options:

- Air Nipper for wire range 0.2mm – 0.8mm.

For cutting larger wire diameters the pin tear method will no longer work. In this case we can fit air operated cutters close to the nozzle head.

- Load and unload shuttle.

Allows automated load & unload, improving the machine throughput / cycle, and allowing for extra stations to be added to the line, e.g. soldering, welding etc.

- Tensioners stand

An essential piece of equipment to mount all supply spools of wire, the unit can be built to hold the required number of spools for the number of spindles on the winding machine. Offered with mobile options, changing reels can be done away from the machine.

- Skeining unit.

When making a solder connection to fine wire, the mechanical strength of a single strand of wire may not be sufficient. The skeining unit reinforces the start and finish leads of the winding by twisting multiple strands of the wire together, so that they will then withstand the soldering process.

We aim to be much more than a machinery supplier. Our team has a vast range of winding experience and is able to offer help and advice on all aspects of coil winding, from tooling design to machine choice and set-up.
